

Company fact sheet

Entity details, what the platform does, and the boilerplate paragraph.

The facts

PRODUCT	zevOS — charging management platform (CSMS)
LEGAL ENTITY	White Stripe Innovations Private Limited
WEBSITE	zevos.ai
HEADQUARTERS	Chandigarh
REGISTERED OFFICE	Plot No 361, Industrial Area Phase 1, Chandigarh - 160002, India
CATEGORY	EV charging software / charging management system
PROTOCOLS	OCPP 1.6J, OCPP 2.0.1, OCPI 2.2.1
MEDIA CONTACT	support@zevos.ai

Boilerplate

Copy this verbatim. It is the description we would like used.

zevOS is a charging management platform for EV charging operators. It connects charge points over OCPP, runs driver payments from a QR code without an app install, prices sessions by energy, time and audience, settles revenue with site partners, and gives operations teams the diagnostics to resolve faults remotely. zevOS is hardware-agnostic

and is built for the Indian market, with GST invoicing, UPI payments and DisCom tariff structures as starting assumptions rather than localisation. zevOS is a product of White Stripe Innovations Private Limited.

What the platform does

- Connects charge points over OCPP, across hardware from different vendors.
 - Takes driver payments from a QR code, with no app install required.
 - Prices sessions by energy, by time and by audience, with the tariff fixed at session start.
 - Calculates and settles revenue share with site partners, with statements they can check themselves.
 - Gives operations teams the diagnostics to resolve most faults without a site visit.
 - Publishes and consumes roaming over OCPI, in both CPO and eMSP roles.
-

What it does not do yet

Stated here so nobody has to discover it. ISO 15118 plug-and-charge is not implemented. Grid services and aggregation are not on the near roadmap. The platform is deployed in a single region, which suits an Indian operator and not yet a multi-region one.
